

Printed circuit board test points and finishes are constantly changing to meet the requirements for faster, more powerful and durable devices while utilizing chemistries designed to reduce their environmental footprint. QA Technology works closely with our customers to develop tip styles that will meet these challenging applications through reliable contact and long life.

100-4058 and X75-4058 Crown

We are pleased to add a new **58** Eight Point Crown tip style in our 100-40 conventional and X75-40 X Probe® Socketless product series. The new tip design is to contact through-hole component leads, posts and connectors in loaded board, in circuit and test applications.

100-1640 Spherical

The **40** Spherical tip style is a great addition to our 100-16 product series. The spherical geometry is perfect for contacting gold pads without leaving witness marks.

Both tip styles can be combined with any standard tube material and spring force in their applicable series.
