

QA Technology has improved on the design and reduced the overall cost of our Probe Extraction Tools. With this new design, we are now able to offer a new tool for use with our 39mil X Probe and 50mil Conventional series. These tools are intended to remove probes with headed tip styles from their sockets or terminations. A replaceable TIP is also available should the tool become damaged.

To use, simply hook the tool under the head of the probe and pull straight up.

### 39mil X Probe 50mil Conventional

#### **P/N: PERX39/050**
